```
#install.packages("tidyverse")  
library("tidyverse")
```

Pipes are a powerful tool for clearly expressing a sequence of multiple operations.

Stacking functions inside of each other can create code that is difficult to read.

```
#create a vector  
v1<-c(12.3,4.32)  
print(v1)
```

```
## [1] 12.30  4.32
```

Method 1

```
m1<-mean(v1)  
print(m1)
```

```
## [1] 8.31
```

```
r1<-round(m1)  
print(r1)
```

```
## [1] 8
```

Method 2

```
r1<-round(mean(v1))  
print(r1)
```

```
## [1] 8
```

Method 3

```
v1 %>% mean() %>% round()
```

```
## [1] 8
```
